**THE ORDNANCE CATALOG
STANDARD NOMENCLATURE LIST NO. G-657**

MASTER PARTS BOOK

**FOR
DODGE TRUCKS**

built from

January 1, 1940 to April 15, 1943

**PARTS FORMERLY LISTED IN MASTER PARTS LIST
TM-10-1199, PUBLISHED MAY 8, 1942, ARE NOW
INCLUDED IN THIS MASTER PARTS LIST, SNL G-657.**

"Dissemination of restricted matter.- The information contained in restricted documents and the essential characteristics of restricted material may be given to any person known to be in the service of the United States and to persons of undoubted loyalty and discretion who are cooperating in Government work, but will not be communicated to the public or to the press except by authorized military public relations agencies. (See also paragraph 18b, AR 380-5, 28 September 1942).

Service Packages Bills of Materials Section	

A SPECIAL MESSAGE • •

In this issue there is a dividing or index page between each group. This dividing page serves as an index to illustrations and parts by sub group in each major group.

The reference or key number of each part in an exploded view will also be found with enlarged picture of such part over its respective column on the parts specifying page.

All parts which are included in the service packages, sets, or kits are ear marked by the letter "K" in the numerical index.

The contents or bill of material of all service packages will be listed "in order of major groups and sub groups" in the Service Package Bill of Material Section.

~~All part~~ numbers which have been superseded are listed in the numerical index showing the superseding or current part number. All current numbers which supersede part numbers previously listed in the first edition TM10-1199 are indicated in the text of the book by this symbol (:). These current part numbers so indicated will be listed along with all previous supersedences which were listed in the first edition TM10-1199 in the "Parts Supersedence List" showing the current and the previous part numbers.

You will find it easy to use this book effectively, if you will spend a few brief moments to acquaint yourself with the way it has been planned. Turn to page "Finger Tip Information."

FINGER-TIP PARTS INFORMATION

PAGE NUMBERING

Roman numerals (I-II-III-IV-V) are used for all pages up to the start of group specifying information, and at that point pages are numbered consecutively in the usual manner.

BODY TYPES:

To make it easy for you to quickly identify any particular body type, all types of bodies with model symbols and contract numbers are shown on pages VI through XIX.

MODEL IDENTIFICATION AND SPECIFICATION CHART

Quickly converts sales symbols into Engineering symbols which are used for specifying parts for a particular truck model.

EXPLODED VIEWS OF MOST MAJOR GROUPS—

- (a) Shows parts in their relative position.
- (b) Each exploded view has an index of its own group. Each part carries a reference number which gives its correct name with its sub-group number and the number of page on which it is specified for particular model application.

SPECIFYING CHARTS

- (a) Set up in column form, except in cases where it proved more practical to give part numbers and name in exploded picture. The aim always—greatest speed and accuracy in specifying parts.
- (b) As far as possible parts are listed showing assemblies with their attaching parts (bolts-nuts) in the sequence of removal or replacement—otherwise attaching parts are listed in lower panel.
- (c) Where attaching parts are not pictured in sequence of removal, a reference or key letter is found directly under the name of the major part. You then go directly to the lower panel under this reference or key letter.

ALMOST EVERY PART PICTURED

- (a) Above each specifying column is a picture of the particular part for quick identification.
- (b) The majority of parts pictured above specifying column carry the reference number of the part shown in exploded view.
- (c) In cases where a type of part carries more than one part number and there are graphic differences in the parts, more than one part is pictured.
- (d) Illustrating each part at top of columns helps parts picker or mechanic in selecting correct parts. However, it is recommended that part numbers be specified from the columns and not from the picture. There are certain instances where types of parts have minor differences which would be important when specifying but not of sufficient importance to warrant more than one picture.
- (e) While it is impracticable to picture all parts in their relative size, this has been done wherever possible.

PARTS INTERCHANGEABILITY LIST

Specifying charts give at a glance—complete parts interchangeability.

ALPHABETICAL INDEX — Located in front of book.

Quick reference to any part by name is provided in the alphabetical index. This index shows the numbers of the sub-group and page on which the parts are listed.

NUMERICAL INDEX — Located in back of book.

Reference to any part number is provided in the numerical index. This index lists all parts in numerical sequence, also their Item Stock number, and shows the sub-group in which each part is listed—also list price, part number and name of vendor (where applicable) and all identifying symbols.
